

Construction update for March

You can really see changes at the church this month. Up in the Wesley attic, the heat exchangers are being installed. Big, shiny snaky ductwork lies on the attic floor for heating and A/C for the classrooms. Ernie and his crew from Corbin and McMahan HVAC are seen here doing the installation.

Downstairs new electric panel boxes are slowly being fitted. The picture below is taken in Tim's old office which will now become a mechanical room.

Nailbenders had a dusty day sawing holes in the plaster ceiling for the HVAC vent openings. By the end of the afternoon, some of them looked like snowmen.

Outside changes are more obvious. Volunteers were busy in the prayer garden grubbing out some of the old shrubbery for another hard day of dirty work.

They built forms for the concrete platforms. The platforms will house the transformers and heat pumps. The concrete truck came earlier than expected and everyone scurried to finish the forms. When concrete arrives, nobody can stop until it is all poured, floated and edged because it sets up quickly.

At the end of the long morning of hard work, children from CUMC provided a surprise lunch for the Nailbenders. It was a welcomed and delicious treat.
