

## June 2008 Construction Update

In June, progress on the building is very obvious inside and outside.

Outside, siding continues to be installed.

The siding is finished, and now it is time to paint it. Volunteers painted the lower parts and professional painters did the top parts.

Block is laid for the foundation for the entry way.

The slab for the new entry is readied for cement.

The slab is finished!!

The dormer is demolished by our volunteers. They love demo work.

Inside, heating, air conditioning units and ductwork are installed.

Hold onto the door Earl!

In the Wesley Foundation fellowship hall, the walls under the window openings are demolished. Volunteers work hard with this project.

The elevator shaft is built.

Walls for the new entry way start to go up.

Shingles go on the roof.

In July look for further progress on the entry way.
